Practice Assignment 4

LIBRARY MANAGEMENT SYSTEM

Following Practice Assignment 3, further develop the new layout and add model in the MVC framework

Exercise 1: Create a admin layout for library management system.

In Practice Assignment 3, there is a menu in area 1 in "Figure1". Add one item to that menu named 'Admin.' When clicking on the admin menu, it should navigate to the admin layout, which is basically similar to the following image:

The diagram illustrates an Admin layout. It features a sidebar on the left labeled 'Menu'. The main content area is labeled 'Content - @Renderbody'. Above the content area is a header section containing a 'LOGO' and the word 'Header'. Below the content area is a 'Footer' section.

Figure 1: Admin layout

Requirements:

- Initialize sample data to display the menu.
- When selecting any item in the menu, it should navigate to the corresponding screen and render the content.
- Prepare sample data to be displayed on the interface.
